

Admin Dashboard

admin.whatfix.com

A platform-level answer to a pattern we keep solving feature by feature

Proposal

admin.whatfix.com

Org Admin · NEW

ENT Dashboard

Content + Widgets · Existing

End User

Guided experience · Existing

THE PROBLEM

We keep solving the same problem, feature by feature

Vara (CTO) at Q-Review: *"Why are we building copy/token portability for every feature? This is not scalable. We should have a single Admin Dashboard for common settings."*

IdP Bloat

1 SCIM app per ENT = 15-20 IdP apps per enterprise. Violates single-app security policies.

15–20

IdP apps per enterprise today

Config Overhead

Copy-pasting bearer tokens and Base URLs per ENT. Error-prone, time-consuming, no central view.

10+

Customers asking for org-level governance

No Org Layer

Zero correlation between ENT dashboards. User management, settings, governance — all siloed per ENT.

\$9.5M

ARR directly impacted

10+ enterprise logos. One consistent ask.

\$3.2M	Kenvue Life Sciences	Delegated admin + centralised user management
\$2.8M	Johnson & Johnson Life Sciences	GxP compliance, role segregation
\$866K	Sanofi Life Sciences	Custom roles, analytics access
\$830K	Volkswagen AG Automotive	Tiered admin, org templates, entity routing
\$554K	Jacobs Engineering Consulting	Exec analytics without full dashboard access
\$529K	First American BFSI	Custom roles, analytics sharing
\$509K	Merck Life Sciences	Custom roles, governed analytics

+ Mitek, Thermo Fisher, American Tower — also confirmed asks

What repeats across all logos

- Global templates & branding (set once, inherit everywhere)
- Delegated / tiered administration (Org Admin)
- Centralised user & license management
- Executive / analytics-only access
- Compliance-driven governance (GxP)

● Heineken — BLOCKING SCIM Adoption (April 2026)

"We need role mapping. Current: ticket → Azure Admin adds group → admin manually uplifts role in Whatfix. This adds a manual step."

Total ARR impacted by org-level governance requests: \$9.5M+ across 9 confirmed logos

Every mature enterprise SaaS has an org-level control plane

Product	Org Admin Layer	Multi-tenant SCIM	Cross-tenant user mgmt	Gap for Whatfix
Okta	✓ Full org dashboard	✓ Native	✓ Groups & roles	—
Salesforce	✓ Org-wide settings	✓ Native	✓ Profiles & permissions	—
Figma	✓ Org admin panel	✓ Native	✓ Members page	—
Notion	✓ Workspace settings	✓ Native	✓ Members across Workspaces	—
Whatfix today	✗ Not available	v1 shipped (v2 WIP)	✗ Manual, per-ENT	← Closing this

Industry insight

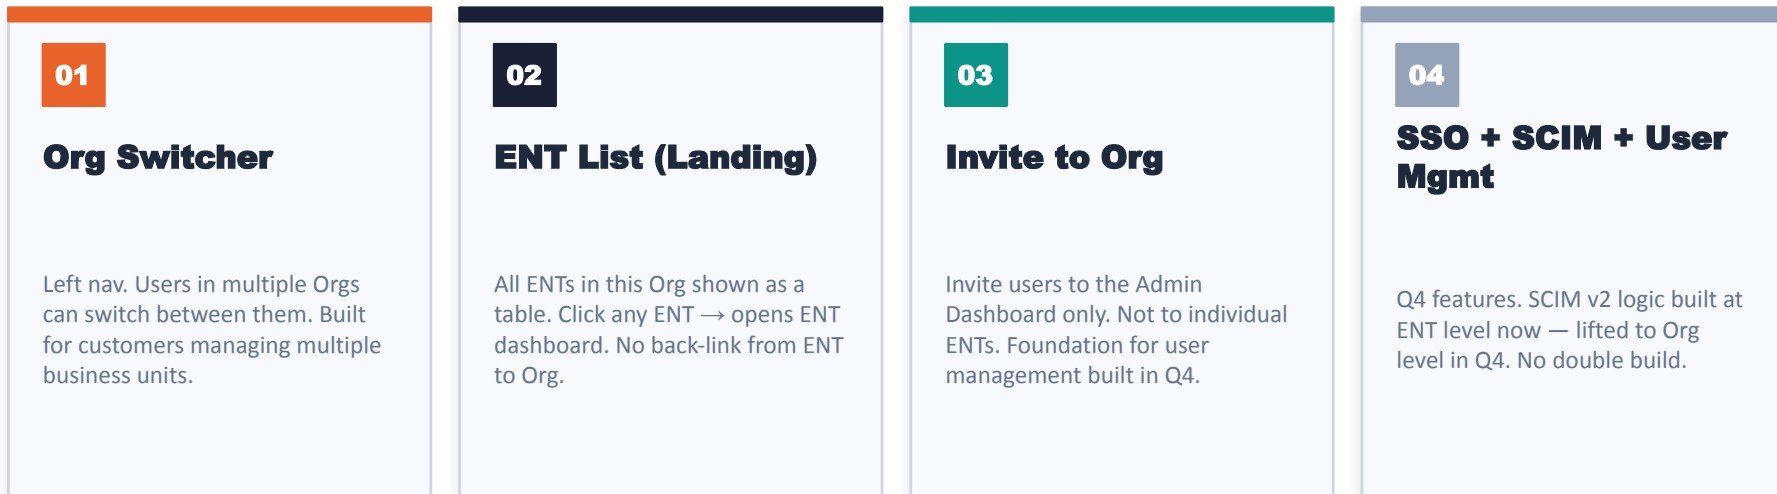

SSO + SCIM + an Org Admin layer are described as "non-negotiable for enterprise adoption" in 2025. Our customers are not making unreasonable asks — they are asking for what every enterprise SaaS already provides. The gap is ours to close.

THE SOLUTION

admin.whatfix.com — a dedicated governance layer

Invite-only access. Each new customer Org is created internally on onboarding.

SCIM v2 is built at ENT level this quarter. In Q4 the same logic is surfaced at Org level — one build, right place. No double engineering.

One token at Org level. Steps 2 & 3 configured per ENT via side drawer.

Step 1

Token & Base URL

At Org level

Generate token once. Select which ENTs to push to. Token is shared across selected ENTs.

Same Base URL for all.

⚠ Regenerating shared token shows non-dismissible warning listing all affected ENTs.

Step 2

User Provisioning

Per ENT — side drawer

Define how Dashboard Users are identified in IdP:

- User Attribute
- Group Name
- Group Attribute

Unique per ENT. Opened from ENT row in Org SCIM page.

Step 3

Role Mapping

Per ENT — side drawer (optional)

Map IdP attribute values → Whatfix roles.
Highest role wins on conflict.
Dynamic — re-evaluated on every SCIM sync.

If skipped: all users get Translator role.

Three quarters. One platform.

Q3 2026

Foundation

- admin.whatfix.com shell (invite-only login)
- Org landing — ENT list
- Org Switcher (multi-org users)
- Invite to Org Dashboard only
- ENT switcher on landing
- No ENT-level features yet

Platform decision made. The house is built.

Architecture foundation

Q4 2026

Features

- SCIM v2 at Org level (Step 1 here, Steps 2 & 3 per ENT)
- SSO config at Org level
- User Management: invite across ENTs with roles
- SCIM v2 at ENT level logic reused — no double build

Unblocks Heineken, J&J, Kenvue, Sanofi, VW.

\$9.5M ARR + GxP compliance

2027

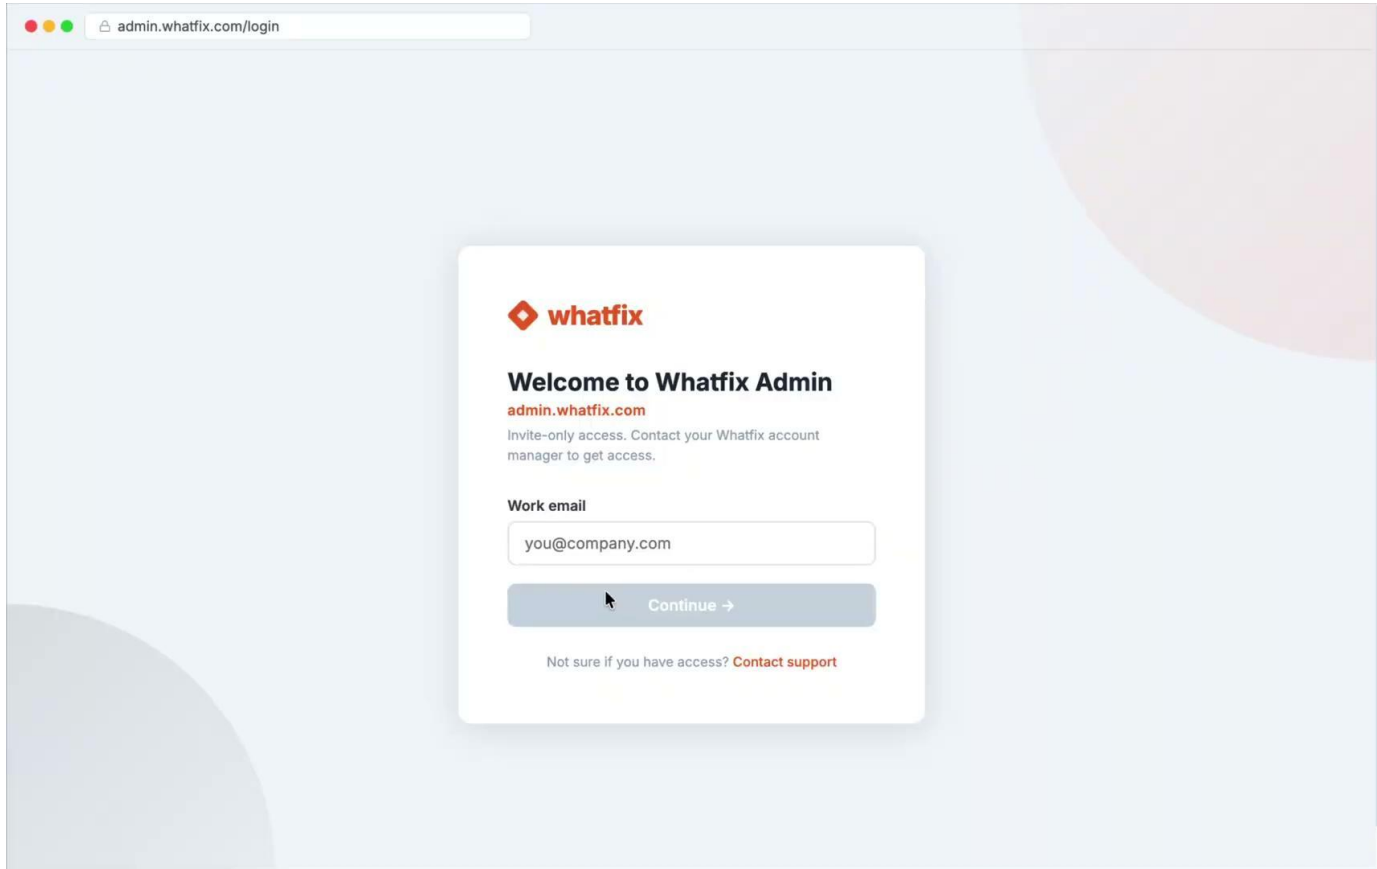

Content Governance

- Org-level templates (branding, configs)
- Parent-child content inheritance
- Approval workflows & audit trails
- Analytics-only access

VW, American Tower, BMS expansion.

Upsell + new enterprise deals

Demo (High Level Prototype)

A screenshot of a web browser window showing the login page for Whatfix Admin. The browser's address bar displays 'admin.whatfix.com/login'. The page features a light blue background with large, faint circular shapes in the corners. A white login card is centered on the page. At the top of the card is the Whatfix logo, consisting of an orange diamond icon and the word 'whatfix' in orange. Below the logo, the text 'Welcome to Whatfix Admin' is displayed in bold black font, followed by 'admin.whatfix.com' in orange. A line of smaller text reads: 'Invite-only access. Contact your Whatfix account manager to get access.' Below this is the label 'Work email' in bold black font, followed by a text input field containing 'you@company.com'. Under the input field is a blue button with a white mouse cursor icon and the text 'Continue →'. At the bottom of the card, a line of text says: 'Not sure if you have access? [Contact support](#)'.

admin.whatfix.com/login

 **whatfix**

Welcome to Whatfix Admin
admin.whatfix.com
Invite-only access. Contact your Whatfix account manager to get access.

Work email

you@company.com

Align on scope & phasing today

01**Confirm Q3 scope — Foundation only**

admin.whatfix.com shell + Org landing (ENT list) + Org Switcher + Invite to Org Dashboard. No ENT-level features yet.

02**Greenlight Q4 feature build**

SCIM v2 logic built at ENT level now. Q4: surface it at Org level. SSO + User Management alongside. One build, right place.

03**Confirm SCIM v2 ships at ENT level this quarter**

Token portability + Role mapping at ENT level. Same logic reused at Org level in Q4. Unblocks Heineken immediately.
