

AI Admin Dashboard (WIP)

Flow Chart (WIP)-  [AI configuration](#)

I. Goal & Scope

The primary goal of the AI Agent Admin Dashboard is to provide a **centralised, single-pane-of-glass interface** where customers can discover, enable, configure, and manage the platform's AI capabilities.

- **For Existing Customers (Paid):** Enable/disable AI features, configure operational parameters, and access best practice guides.
- **For Prospect Customers (Not Paid):** Explore AI features via demos/videos and easily initiate a sales contact.

II. Target Users

Target Users	AI Agents
Content Authors, Trainers, Prod Owners	Authoring Agent (Flow, Pop-up)
End Users	Guidance Agent (Seek, Quick Read)
Business Leaders, Analysts, PMs	Insights Agent (Ask AI, Deep Think)
Application Admins / IT Admins	All Agents

Access Control Requirements (R1)

- **R1.1 Role-Based Access:** The dashboard features (Configuration, Enable/Disable) must be secured and only accessible by users with the **Admin** role.
- **R1.2 View-Only Access:** Other primary users (Content Authors, Editor, Translator, any other custom role) should have *view-only* access to the Best Practices/How-To sections for their relevant agents.

III. AI Agent Inventory and Structure

The dashboard will manage the following agents and their respective features:

Agent	Target User	Features to Manage
1. Authoring Agent	Content Authors/Admins	Flow, Pop Up
2. Guidance Agent	End Users	Seek, Quick Read
3. Insights Agent	Business Leaders/Analysts	Ask AI, Deep Think

IV. Feature Requirements: Enablement & Configuration

A. Discoverability & Initial State (R2)

- **R2.1 Primary Entry Point:** A clear navigation link named "**AI Agent Management**" or similar, visible in the dashboard menu under 'Setup'.
- **R2.2 Paid vs. Prospect View:**
 - **Paid/Enabled Agent:** Show current configuration settings and the **Enable/Disable** toggle.
 - **Prospect/Disabled Agent:** Show a feature overview/demo and a clear "**Contact Sales to Enable**" call-to-action (CTA).

B. Enable/Disable Scenarios & Behaviour (R3)

Action	Agent State	Behaviour/Scenario
Enable	Currently Disabled	R3.1 Workflow Trigger: On save, an email notification must be sent to a configurable list of stakeholders (e.g., Admin, Content Author) confirming activation.

Disable	Currently Enabled	R3.2 Warning: Display a confirmation modal detailing the impact (e.g., features immediately stop functioning for all dashboard users and end-users). R3.3 Rollback: All feature configuration settings must be preserved (not deleted) for easy re-enablement.
Default State	New Customer	All AI agents must be enabled by default.
Scope	Feature Level	Enable/Disable must be configurable at the <i>feature level</i> (e.g., enable 'Flow' but disable 'Pop Up').

C. Configuration Parameters (R4)

This section details the mandatory configurations for each *feature* (e.g., Flow, Seek, Ask AI).

Configuration Item	Scope/Impact	Requirement Detail
Action: Enable/Disable	Feature Level	R4.1 Action Toggle. (See R3)
Branding Preview	ENT/Tenant Level	R4.3 Display: Show a read-only preview of the platform's current enterprise-level styling/colours, showing how the AI

		feature will look (e.g., pop-up colours).
End User Rating	Feature Level	R4.4 Toggle: Enable/Disable the ability for end-users to rate the AI-generated content (e.g., a thumbs up/down icon).
Custom Parameters	Feature Level	R4.5 Input Field: Allow IT Admin to set specific, technical parameters for the AI feature (TBD by Engineering, e.g., model temperature).
Custom Shortcut	Feature Level	R4.6 Input Field: Allow IT Admin to define a custom keyboard shortcut to trigger the feature (e.g., <code>Ctrl+Shift+A</code> for 'Seek').

D. Educational Content & Preview (R5)

Requirement	User Access	Detail
Customer Experience Preview	All Primary Users	R5.1 Interactive Preview: A sandbox area where the user can test the feature <i>after</i> adjusting parameters (e.g., see how the 'Flow' agent

		behaves with their new settings).
Best Practices / How-To	All Primary Users	R5.2 Content: Dedicated section with tips/guides on maximising the agent's effectiveness.
See How it Works	All Primary Users	R5.3 Embeds: Embed videos or link to help articles explaining the agent's core mechanics.

V. Technical & Scalability Requirements

Scalability (R6)

The system must be scalable to easily accommodate future AI agents/features without major code changes to the dashboard UI.

- **R6.1 Automatic Feature Registration:** The configuration UI must be driven by a centralised configuration artifact (e.g., a database table, JSON config file) containing metadata for each feature:
 - `feature_ID`
 - `feature_Name`
 - `parent_Agent`
 - `default_State`
 - `configurable_Parameters` (list of R4 items)
- **R6.2 Artifact Management:** When a new AI feature is developed, the team should only need to update this central artifact to automatically list the feature on the admin dashboard for configuration.
